

Question: How many pickleball courts fit on a tennis court?

Answer: You can fit four standard pickleball courts on a tennis court, as long as the corners are square and it is regulation size (60' x 120'). Each pickleball court should consist of the playing area of 20' x 44', and the total recommended size of each court with overruns is 30' x 60'.

If you picture a standard size tennis court and cut it in half at the net line, each half of the full tennis court can have two pickleball courts on each end.

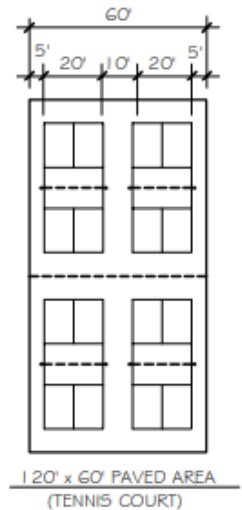

Converting a Tennis Court to Pickleball Courts

If you are considering completely converting a tennis court into multiple permanent pickleball courts, here are some items you will need to address:

- Removal of the existing tennis posts, which are usually in a concrete footer / sleeve & removal of the pipe anchor. The pipe anchor is cemented into the base, directly under the tennis net at center to hold the net center strap.

- Since the net posts are in the center of the old tennis court and between the two sets of new pickleball courts, you may be able to cap the holes if sleeves were installed in the concrete post footers. This would minimize the need for removal and surface repair.
- Installing new pickleball net post sleeves in footers for all 4 courts. The pickleball posts can be placed and removed as needed, with the sleeves installed.
- Pipe anchors will also need to be installed at the center of each net. This should be installed in a small concrete footer and will provide a tether point for the net center strap
- Resurface the tennis court as four independent pickleball courts, utilizing SportMaster [pickleball court surfaces](#) & stripe accordingly.

Adding Pickleball Lines To A Tennis Court

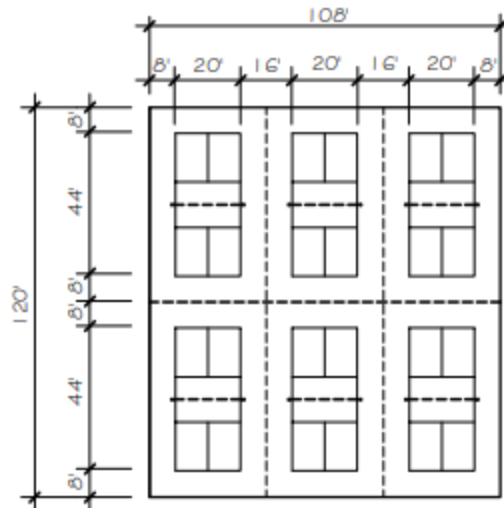

If you still want to play tennis on your court, you should consider adding pickleball lines to a tennis court. This is also known as “blended lines”. The tennis court lines will remain and pickleball court lines can be added in a different color. Generally, the tennis net will remain and you can use portable net systems for pickleball. There are a few common variations of blended pickleball lines, but most of them consist of adding 2 pickleball courts, per full tennis court.

You can use the [pickleball court surface](#) coatings as your blended line paint. Usually, a line paint color in the same family of the surface coatings will work well. Just lighten or darken it by adding white line paint or black Acrylic Resurfacer. For simplicity, black Acrylic Resurfacer can also be used to produce black blended lines for pickleball.

Convert Bank of Two Tennis Courts to Pickleball

What if you have a double tennis court and you want to convert it to pickleball? Here is a diagram that shows the best way to permanently convert a bank of two tennis courts to pickleball:
